INSTRON TERM FEATURED AT *RX FOR SUCCESS*

Instron, a leading provider of testing equipment designed to evaluate mechanical properties of materials and components, is pleased to announce our affiliation with the [International Museum of Surgical Science](#) (IMSS). The museum's new *RX for Success* health career center will feature Instron TERMS LigaGen system, which is a functional bioreactor tissue chamber used in labs for tendon and ligament growth.

“This new career center was designed to enlighten visitors, educators, and students of all ages on the rich variety of occupations available within the field of healthcare,” says Emmet Liston, Manager of Development and Exhibits at IMSS. “It spotlights several promising career possibilities including health information management, medical laboratory science, biomedical engineering, and radiology.”

As part of this new partnership, Instron TERM will be present at the next IMSS career fair that will be held on March 22-23rd.

“We believe this is a great opportunity to make an impact in the community: to promote science and engineering education as well as introduce Instron and ITW's technology, and commitment to advancing health care through technology to a new audience,” says Anna Wynn, Business Development Manager, Instron TERM. “We are dedicated to providing state-of-the-art technology to enhance tissue engineering and regenerative medicine applications and look forward to working with scientists of all ages.”
